

Our dream is a world without interruptions.

Zabbix is an all-in-one, open-source monitoring solution that makes any hardware, software, service, or web application more efficient and reliable.

Monitor anything:

InT Trust, a certified partner of Zabbix, offers you an open-source monitoring solution which automatically detects threats and issues and then either notifies you or fixes them by itself – freeing up your engineers, improving the quality of your services, and making your business more efficient.

Instead of subscribing to multiple solutions for monitoring infrastructure components, we can be your “one-stop shop” when it comes to keeping track of your entire IT stack. With Zabbix you will monitor anything – from physical and virtual servers or containers to network infrastructure, applications, and cloud services.

No matter what field you're in, there's no substitute for consistent, problem-free service when it comes to gaining the trust and loyalty of your customers. Zabbix has a strong track record of helping customers across multiple verticals achieve that goal.

Why Zabbix?

With Zabbix enterprise IT infrastructure monitoring software you can deploy from anywhere, monitor any device, system, or app in any environment while being able to provide comprehensive data protection, easy integration, and limitless visualization options. When thresholds are reached, Zabbix can display this information or send notifications via email, SMS, or multiple messaging services. Zabbix also allows administrators to quickly recognize server and device problems, reducing system downtime and the risk of system failure. Zabbix solutions are used by SMBs and large enterprises across all industries.

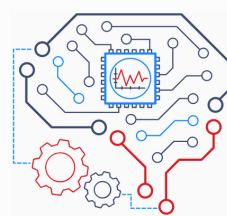

Zabbix features at a glance

- Metric Collection
- Problem Detection
- Alerting
- Data Visualization
- Single Pane of Glass
- Business Monitoring
- Integrations
- Security
- Deployment
